Reflex Test List 2022		
Test * Reflex testing is standard practice	Condition(s)	Reflex Test(s)
Absolute Granulocyte Count with CBC (AGCCBC)	Presence of blasts, atypical lymphocytes, or lymphoma cells	Manual Differential
Complete Blood Count (CBC)	Out patient with a WBC >19.99 k/µL or a WBC < 2.01 k/µL	Automated Differential
Urinalysis (with microscopic)	Urine microscopic has WBC >10/hpf	UCUL (Urine Culture) only from preservitive tube
Urinalysis with Reflex	Positive Protein, HGB, or Leukocyte Esterase	Urine Microscopic
Basic Lipid Panel (LIPB)	Triglycerides > 400 mg/dL	LDL Cholesterol, Direct (LDLDCT)
Maternal Drug Screen (MDSRF)	Preliminary Positive	Amphetamine Confirmation (Urine), Barbiturate Confirmation (Urine), Benzodiazepines Confirmation (Urine), Cannabinoid Confirmation(Urine), Cocaine Confirmation(Urine), Opiate Confirmation(Urine), Oxycodone Confirmation(Urine), Phencyclidine Confirmation(Urine), Ethanol Confirmation (Urine)
Neonatal Drug Screen (NDSRF)	Preliminary Positive	Amphetamine Confirmation (Urine), Barbiturate Confirmation (Urine), Benzodiazepines Confirmation (Urine), Cannabinoid Confirmation(Urine), Cocaine Confirmation(Urine), Opiate Confirmation(Urine), Oxycodone Confirmation(Urine), Phencyclidine Confirmation(Urine), Ethanol Confirmation (Urine)
Pediatric Drug Screen (PDSRF)	Preliminary Positive	Amphetamine Confirmation (Urine), Barbiturate Confirmation (Urine), Benzodiazepines Confirmation (Urine), Cannabinoid Confirmation(Urine), Cocaine Confirmation(Urine), Opiate Confirmation(Urine), Oxycodone Confirmation(Urine), Phencyclidine Confirmation(Urine), Ethanol Confirmation (Urine)
Toxicology Screen with Confirmation, Urine (UTOXRF)	Presumptive Positive	Amphetamine Confirmation (Urine), Barbiturate Confirmation (Urine), Benzodiazepines Confirmation (Urine), Cannabinoid Confirmation(Urine), Cocaine Confirmation(Urine), Opiate Confirmation(Urine), Oxycodone Confirmation(Urine), Phencyclidine Confirmation(Urine), Ethanol Confirmation (Urine)
Vitamin B12 with Reflex (B12RFX)	B12 ≥150 pg/mL but ≤400 pg/mL	Methlymalonic Acid (MMA) and Homocysteine (HOMCYS)
HIV, Rapid Use for ED Use	Reactive	HIV-1 p24 Ag +HIV-1-2 Ab, with reflex to differentiation (HIV12C)
*AFB Culture and Stain (AFC)	Positive Findings	Organism ID & Susceptibility, Molecular Detection of TB and Rifampin Resistance
*AFB Culture and Stain for Patients with Cystic Fibrosis (AFBCF)	Positive Findings	Organism ID & Susceptibility, Molecular Detection of TB and
*AFB Culture Only (AFCO)	Positive Findings	Rifampin Resistance Organism ID & Susceptibility
*Anaerobe Culture (ANACUL)	Positive Findings	Organism ID & Susceptibility
*Blood Culture (BLCUL)	Positive Findings	Organism ID & Susceptibility
*Blood Parasites (BLDPAR)	Positive Findings	Calculation of parasitemia percentage plus review of positive slides by medical director
*Body Fluid Culture and Stain (BFCUL)	Positive Findings	Organism ID & Susceptibility
*Bronchoscopy Culture and Gram Stain (BALCSM) *Campylobacter Culture (CAMPY)	Positive Findings Positive Findings	Organism ID & Susceptibility Organism ID & Susceptibility
*Catheter Tip Culture (CTCUL)	Positive Findings	Organism ID & Susceptibility
*Clostridium difficile Toxin by PCR (CDPCR)	Positive Findings	C. difficile Toxin by EIA
*Cryptococcus Ag Detection (CAD)	Positive Findings	Titration of positive specimens to determine titer. Culture of positive specimen (FUNCSF) if not already ordered.
*Cryptosporidium Examination (CRYSPO)	Positive Findings	Positive Cryptosporidium results are confirmed with microscopy after concentration of the specimen
*CSF Culture and Stain (CSFCUL)	Positive Findings	Organism ID & Susceptibility
*Cystic Fibrosis Respiratory Culture (CFRCUL)	Positive Findings	Organism ID & Susceptibility
*Ear Culture and Gram Stain EARCSM)	Positive Findings	Organism ID & Susceptibility
*Eye Culture (EYEC)	Positive Findings	Organism ID & Susceptibility
*Eye Culture and Gram Stain (EYECSM)	Positive Findings	Organism ID & Susceptibility
*Fungal Blood Culture (HISTCL)	Positive Findings	Organism ID & Susceptibility
*Fungal Culture -Non Dermal Sites (FCUL) *Fungal Culture and Smear - Non Dermal (FCULSM)	Positive Findings Positive Findings	Organism ID & Susceptibility Organism ID & Susceptibility
*Fungal Culture and Smear Hair, Skin, Nail (FUSNSM)	Positive Findings	Organism ID & Susceptibility
*Fungal Culture Hair, Skin, Nail (ACFSC)	Positive Findings	Organism ID & Susceptibility
*Fungus CSF Culture/CAD (FUNCSF)	Positive Findings	Organism ID & Susceptibility
*Fungus Screen (FUNGSC)	Positive Findings	Organism ID & Susceptibility
*Group B Strep Culture Screen (GRPBSC)	Positive Findings	Organism ID (& Susceptibility if patient is β-lactam allergic)
*Helicobacter pylori Culture (HPYCUL)	Positive Findings	Organism ID & Sendout Susceptibility
*Intraoperative Hardware Culture (IOHWC)	Positive Findings	Organism ID & Susceptibility
*Legionella Culture (LEGCUL) *Miscellaneous Culture (MISCUL)	Positive Findings Positive Findings	Organism ID Organism ID & Susceptibility
*Miscellaneous Culture (MISCOL)	Positive Findings Positive Findings	Organism ID & Susceptibility Organism ID & Susceptibility
*Miscellaneous Culture Screen (MISCSC)	Positive Findings	Organism ID & Susceptibility
*Miscellaneous GC Screen (MISCGC) & Beta Lactamase testing	Positive Findings	Organism ID & Beta Lactamase
*MRSA Culture Screen (MRSASC)	Positive Findings	Organism ID
*MRSA/Staph aureus Culture Screen (SANSAL)	Positive Findings	Organism ID
*Nocardia Culture and Stain (NOCARD)	Positive Findings	Organism ID & Sendout Susceptibility
*Nocardia Culture Only (NOCARC)	Positive Findings	Organism ID & Sendout Susceptibility
*Orthopedic Implant Culture (ORTCUL)	Positive Findings	Organism ID & Susceptibility

Test * Reflex testing is standard practice	Condition(s)	Reflex Test(s)
Prostatic Secretion Culture (PSCUL)	Positive Findings	Organism ID & Susceptibility
*Respiratory Culture and Stain (RCULST)	Positive Findings	Organism ID & Susceptibility
*Sinus Culture and Gram Stain (SINUSC)	Positive Findings	Organism ID & Susceptibility
*Throat Culture, Routine (THRCUL)	Positive Findings	Organism ID
*Tissue Culture and Stain (TISCUL)	Positive Findings	Organism ID & Susceptibility
*Urine Culture (URCUL) *Vibrio Culture (VIBCUL)	Positive Findings	Organism ID & Susceptibility Organism ID & Susceptibility
*VRE Culture Screen (VRESC)	Positive Findings Positive Findings	Organism ID
*Wound Culture and Gram Stain (WCUL)	Positive Findings	Organism ID & Susceptibility
*Yersinia Culture (YERCUL)	Positive Findings	Organism ID & Susceptibility
*Aeromonas/Plesiomonas Culture (AERPLE)	Positive Findings	Organism ID & Susceptibility
AFB Identification and Susceptibility Test (AFIDST)	Positive Findings	Susceptibility
AFB Stain Only (AFS)	Positive Findings	PCR testing to determine If Mycobacteria tuberculosis complex vs. nontuberculosis Mycobacteria
Gram stain (MGMST)	Beaded, gram-positive filamentous and branching bacteria are present	Partial acid-fast stain and Nocardia culture, unless these have already been ordered
Group B Strep PCR (GBPCR)	Positive Findings	Susceptibility if patient is β -lactam allergic)
S. aureus PCR	Indeterminate	S. aureus culture screen (SANSAL)
Stool Gastrointestinal Panel by PCR (STGIPR and STGIPI)	Positive for Salmonella spp. or Shigella spp.	Salmonella Shigella Culture for susceptibility testing and/or epidemiologic investigation. Salmonella isolates and specimens positive for shiga-toxin genes will be submitted to ODH laboratory for further characterization.
Enteric Bacterial Panel by PCR (STLPCR)	Positive for Salmonella spp. or Shigella spp.	Salmonella Shigella Culture for susceptibility testing and/or epidemiologic investigation. Salmonella isolates and specimens positive for shiga-toxin genes will be submitted to ODH laboratory for further characterization.
Allergen Peanut IgE with reflex to Peanut components IgE (PNTRFX)	Values >= 0.35 kU/L	Peanut component panel (PNUTCP)
ANA by IFA Reflex (PANEL)	If ANA by IFA is Positive	ANAS <u>AND</u> DNA Antibody with Confirmation <u>AND</u> ENA Antibody Panel (SSA Ab, SSB Ab, Smith Ab, JO-1 Ab, Chromatin, Scleroderma, RNP Ab, Ribosomal RNP, and Centromere)will be performed and billed.
ANA Panel I (ANA1)	If ANA screen by EIA is positive	ANAIFS <u>AND</u> ENA Antibody Panel (SSA Ab, SSB Ab, Smith Ab, JO-1 Ab, Chromatin, Scleroderma, RNP Ab, Ribosomal RNP, and Centromere will be performed and billed), <u>AND</u> DNA Antibody with Confirmation
Anti-Neutrophil Cytoplasmic Antibody (ANCA)	Positive or equivocal	Proteinase 3 Autoantibodies and / or Myeloperoxidase Autoantibodies
Celiac Screen(CELSCR)	For all Tissue Transglutaminase IgA >= 20 U	Gliadin (Deamidated) IgA Ab
DNA Antibody with Confirmation (DNA)	Positive	Crithidia luciliae
Hepatitis B Surface Antigen (HBSAG) Hepatitis C Antibody IA w/Confirmatory (AHCV1B)	Positive Positive or equivocal	Hepatitis B Surface Antigen, Confirmatory Hepatitis C RNA by PCR
HIV 1 2 Combo Antigen / Antibody (HIV12)	Positive (preliminary)	Human Immuno Deficiency Virus Types 1 & 2 Antibody
Lyme Antibody Early Disease -< =30 days of signs or symptoms,	Positive or equivocal	IgG and IgM Western Blot
with Reflex (LMERLY) Lyme Antibody Late Disease - >30 days of signs or symptoms, with		5 F
	Positive or equivocal	IgG Western Blot
Reflex (LMLATE)	Positive or equivocal	•
Mitochondrial Antibody Panel (MITO)	Positive	Mitochondrial Titer
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET)	Positive Positive	Mitochondrial Titer Parietal Cell Titer
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX)	Positive Positive M protein identified	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET)	Positive Positive	Mitochondrial Titer Parietal Cell Titer
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX)	Positive Positive M protein identified M protein identified or clinically indicated	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR)	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4)	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim)	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim) Celiac Screen(CELSCR)	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative Gliadin (Deamidated) IgA Ab <20	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim)	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen Endomysial IGA
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim) Celiac Screen(CELSCR) Celiac Screen(CELSCR)	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative Gliadin (Deamidated) IgA Ab <20 For all Tissue Transglutaminase IgA < 20 U	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen Endomysial IGA Total IGA
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) ADAMTS13 Activity (ADAM13A)	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative Gliadin (Deamidated) IgA Ab <20 For all Tissue Transglutaminase IgA < 20 U Total IGA >=7 Total IGA <7 If low and ADAMTS13 Inhibitor negative	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen Endomysial IGA Total IGA Gliadin (Deamidated) IgA Ab Gliadin (Deamidated) IgG Ab and Tissue Transglutaminase
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) ADAMTS13 Activity (ADAM13A) Anti-Platelet Factor 4 (PLATF4)	Positive Positive M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative Gliadin (Deamidated) IgA Ab <20 For all Tissue Transglutaminase IgA < 20 U Total IGA >=7 Total IGA <7 If low and ADAMTS13 Inhibitor negative Positive PF4 by ELISA	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen Endomysial IGA Gliadin (Deamidated) IgA Ab Gliadin (Deamidated) IgG Ab and Tissue Transglutaminase IgG ADAMTS13 antibody Heparin induced platelet aggregation
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) ADAMTS13 Activity (ADAM13A)	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative Gliadin (Deamidated) IgA Ab <20 For all Tissue Transglutaminase IgA < 20 U Total IGA >=7 Total IGA <7 If low and ADAMTS13 Inhibitor negative Positive PF4 by ELISA Clinically indicated per pathologist	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen Endomysial IGA Gliadin (Deamidated) IgA Ab Gliadin (Deamidated) IgG Ab and Tissue Transglutaminase IgG ADAMTS13 antibody
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) ADAMTS13 Activity (ADAM13A) Anti-Platelet Factor 4 (PLATF4) Antithrombin III Activity APC resistance (APC)	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative Gliadin (Deamidated) IgA Ab <20 For all Tissue Transglutaminase IgA < 20 U Total IGA >=7 Total IGA <7 If Iow and ADAMTS13 Inhibitor negative Positive PF4 by ELISA Clinically indicated per pathologist Positive result or clinically indicated based on pharmaceuticals	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen Endomysial IGA Gliadin (Deamidated) IgA Ab Gliadin (Deamidated) IgG Ab and Tissue Transglutaminase IgG ADAMTS13 antibody Heparin induced platelet aggregation Antithrombin III Antigen Factor V Leiden, Thrombin Time, Anti-Xa Level
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) ADAMTS13 Activity (ADAM13A) Anti-Platelet Factor 4 (PLATF4) Antihrombin III Activity	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative Gliadin (Deamidated) IgA Ab <20 For all Tissue Transglutaminase IgA < 20 U Total IGA >=7 Total IGA <7 If Iow and ADAMTS13 Inhibitor negative Positive PF4 by ELISA Clinically indicated per pathologist Positive result or clinically indicated based on	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen Endomysial IGA Total IGA Gliadin (Deamidated) IgA Ab Gliadin (Deamidated) IgG Ab and Tissue Transglutaminase IgG ADAMTS13 antibody Heparin induced platelet aggregation Antithrombin III Antigen Factor V Leiden, Thrombin Time, Anti-Xa Level Factor VIII Chromogenic
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) ADAMTS13 Activity (ADAM13A) Anti-Platelet Factor 4 (PLATF4) Antithrombin III Activity APC resistance (APC)	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative Gliadin (Deamidated) IgA Ab <20 For all Tissue Transglutaminase IgA < 20 U Total IGA >=7 Total IGA <7 If Iow and ADAMTS13 Inhibitor negative Positive PF4 by ELISA Clinically indicated per pathologist Positive result or clinically indicated based on pharmaceuticals	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen Endomysial IGA Gliadin (Deamidated) IgA Ab Gliadin (Deamidated) IgG Ab and Tissue Transglutaminase IgG ADAMTS13 antibody Heparin induced platelet aggregation Antithrombin III Antigen Factor V Leiden, Thrombin Time, Anti-Xa Level Factor VIII Chromogenic Sickle Solubility (if patient is ≥6 Months), Hb Variant HPLC, Isoelectric Focusing (if clinically indicated)
Mitochondrial Antibody Panel (MITO) Parietal Cell Antibody Panel (PARIET) Protein Electrophoresis, Serum, with IFE (SEPGRX) Protein Electrophoresis, Urine, with IFE (UEPGRX) Rapid Plasma Reagin (RPR) Smooth Muscle Antibody Panel (SMOOTH) Syphilis Total with Reflex (SYPHTX) Thyroid Cancer (Thyroglobulin) Monitoring VDRL CSF Rapid Plasma Reagin (RPR) (as part of the SYPHTX algorithim) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) Celiac Screen(CELSCR) ADAMTS13 Activity (ADAM13A) Anti-Platelet Factor 4 (PLATF4) Antithrombin III Activity APC resistance (APC) Factor VIII Activity	Positive Positive M protein identified M protein identified or clinically indicated Positive Positive Reactive Throglobulin Antibody is positive(>=14.4) Reactive Negative Gliadin (Deamidated) IgA Ab <20 For all Tissue Transglutaminase IgA < 20 U Total IGA >=7 Total IGA <7 If low and ADAMTS13 Inhibitor negative Positive PF4 by ELISA Clinically indicated per pathologist Positive result or clinically indicated based on pharmaceuticals Clinically indicated per pathologist	Mitochondrial Titer Parietal Cell Titer Monoclonal Protein, Blood Monoclonal Protein, Urine RPR Quantitative Titer Smooth Muscle Titer Rapid Plasma Reagin LC-MS/MS Thyroglobulin measurement for Thyroglobulin Antibody Interference VDRL CSF Titer Treponemal palladium Antigen Endomysial IGA Total IGA Gliadin (Deamidated) IgG Ab and Tissue Transglutaminase IgG ADAMTS13 antibody Heparin induced platelet aggregation Antithrombin III Antigen Factor V Leiden, Thrombin Time, Anti-Xa Level Factor VIII Chromogenic Sickle Solubility (if patient is ≥6 Months), Hb Variant HPLC,

Von Willebrand Panel (VWFPN)	Clinically indicated per pathologist	Platelet Neutralization
Bone Marrow Chromosome Analysis with Reflex SNP Array	Chromosome analysis results are normal, suboptimal, or cultures present no growth	SNP Arrays
Product of Conception Chromosome Analysis POCHF	if normal female or no growth of tissue	SNP array testing
Chromosome Analysis with Reflex AML FISH panel (CHRAML)	If insufficient cells for chromosome analysis.	FISH for Acute Myeloid Leukemia Panel (FAMLPN)
Chromosome Analysis with Reflex MDS FISH (CHRMDS)	If insufficient cells for chromosome analysis.	FISH for Myelodysplasia (FSHMDS)
FISH for Plasma Cell Myeloma (FSHPCM)	If an IGH translocation is present that does not represent an IGH/CCND1 translocation, additional reflex studies will be performed using probes for IGH/MMSET and IGH/MAF.	FISH for Plasma Cell Myeloma Extended Panel (PCMEXT)
BCR-ABL Qualitative Multiplex RT-PCR	When p190 or p210 BCR/ABL1 transcripts are detected by this test, reflex quantitative analysis will also be performed	P210BM, P210PB, P190BM, P190PB
Type and Screen (TSCR) Type and Screen, 30 day (TSCR30) Type and Screen, Prenatal (TSPN) ABO Rh Typing (ABORH) Antiglobulin Test, Indirect (IAGT)	 Patients for whom prophylactic phenotype matching may be indicated, including sickle cell anemia, thalassemia, and any other medical condition requiring long-term Red Cell transfusion support Selected patients with clinically significant alloantibodies for whom standard serological typing cannot be performed, e.g., due to positive direct antiglobulin test or recent transfusion Patients with serological reactivity that interferes with exclusion of clinically significant antibodies, including autoantibodies, high-titer, low-avidity antibodies, and selected cases of antibody reactivity with no apparent specificity Patients with suspected antibody to a high prevalence antigen, or other antigen for which typing sera are not readily available Patients positive for an antigen by serological testing and the corresponding antibody is identified 	Red cell molecular testing depending on test results – various reference labs Reference Lab red cell pheotyping, e.g reticulocyte typing
Antiglobulin Test, Direct (DAGT) ABO Rh, D.A.T. of Cord Blood (CORDB)	Positive result IgG positive in a newborn whose mom has an	Monospecific C3 and IgG, and eluate if IgG positive Eluate testing and typing the newborn for the corresponding
Antiglobulin Test, Direct (DAGT)	antibody	antigen only, not the allele
Type and Screen (TSCR) Antiglobulin Test, Direct (DAGT)	Minor incompatible stem cell transplants and solid organ transplants to detect passenger lymphocte syndrome	Polypecific direct antiglobulin test (DAGT). If positive IgG and C3. If IgG positive then an eluate and identification of the antibody if needed
Type and Screen (TSCR) Type and Screen, 30 day (TSCR30) Type and Screen, Prenatal (TSPN) Type and Screen, Postdelivery (POSDEL) Antiglobulin Test, Indirect (IAGT)	Pregnant patient with a red cell antibody which may cause hemolytic disease of the fetus and newborn	Antibody titer
Type and Screen (TSCR) Type and Screen, 30 day (TSCR30) Type and Screen, Prenatal (TSPN) Type and Screen, Postdelivery (POSDEL) Antiglobulin Test, Indirect (IAGT)	Screen is positive Patient has been transfused or is pregnant, or unknown history Antibody screen reactivity (pattern or strength) has changed significantly, or Enough time has passed per SOP to require a re-evaluation.	Antibody Identification (inclusive of panel, elution, adsorption, etc.) Red cell antigen typing, donor and recipient, as applicable
ABO Rh Typing (ABORH) Type and Screen (TSCR) Type and Screen, 30 day (TSCR30) Type and Screen, Prenatal (TSPN) Type and Screen, Postdelivery (POSDEL) Antiglobulin Test, Indirect (IAGT)	ABO forward and reverse group do not agree, mixed-field reactions in ABO/Rh typing, D typing results do not agree	Resolution of type discrepancies with additional serological studies or molecular studies, as indicated
